## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 7-9 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Holderle et al (4,711,225).

Claims 1, 5, and 7-9 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by JP2001280311 or JP5149204.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Holderle et al (4,711,225) in view of Fujita (5,875,758). Holderle et al show everything except the suction pipe being formed by plastic molding, and the elevations and/or depressions being produced by means of a core melt-out method of a half-shell casting method. Holderle et al are silent as to the type of material utilized to form the suction pipe. Fujita teaches that it is old in the art to form the suction pipe by plastic

molding. It would have been obvious to one having ordinary skill in the art to form the suction pipe by plastic molding, in order to utilize plastic, a conventional, inexpensive durable, and light-weight material as the suction pipe. In addition, it would have been obvious to one having ordinary skill in the art to utilize any of a number of types of conventional methods to form the elevations and/or depressions in the wall of the suction pipe, including the core melt-out method or the half-shell casting method since these are art recognized alternative equivalents known for the same purpose.

#### ***Allowable Subject Matter***

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
